

63S280

# High Performance 256x8 PROM TiW PROM Family

**53/63S280**  
**53/63S281**  
**53/63S281A**

**3**

## Features/Benefits

- 28-ns maximum access time
- Reliable titanium-tungsten fuses (TiW) guarantee greater than 98% programming yields
- Low-voltage generic programming
- PNP inputs for low input current
- Open collector or three-state outputs

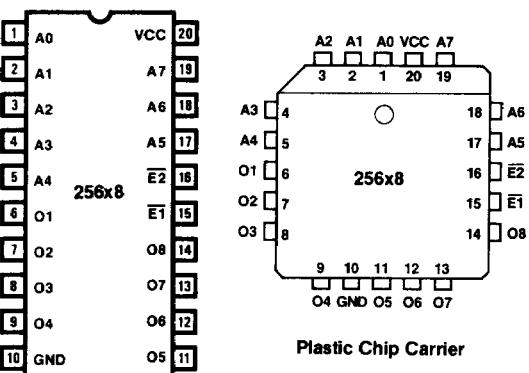

## Applications

- Microprogram control store
- Microprocessor program store
- Look-up table
- Character generator
- Code converter
- Programmable Logic Element (PLE™) with 8 inputs, 8 outputs, and 256 product terms

## Selection Guide

|        |              | OC      |      |               |              | 63S280          | 53S288  |

## Pin Configurations

## Description

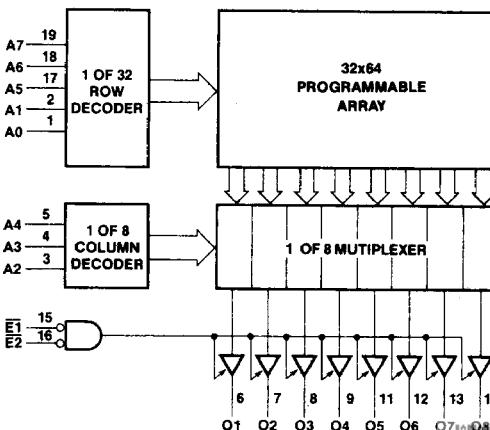

The 53/63S280 and 53/63S281/A are 256x8 bipolar PROMs featuring low input current PNP inputs, full Schottky clamping, and open collector or three-state outputs. The titanium-tungsten fuses store a logical low and are programmed to the high state. Special on-chip circuitry and extra fuses provide preprogramming testing which assures high programming yields and high reliability.

The 63 series is specified for operation over the commercial temperature and voltage range. The 53 series is specified for the military ranges.

## Programming

The 53/63S280 and 53/63S281/A PROMs are programmed with the same programming algorithm as all other Monolithic Memories' generic TiW PROMs. For details contact the factory.

## Block Diagram

**53/63S280 53/63S281/A****Absolute Maximum Ratings**

|                          | Operating       | Programming |
|--------------------------|-----------------|-------------|
| Supply voltage $V_{CC}$  | -0.5 V to 7 V   | 12 V        |
| Input voltage            | -1.5 V to 7 V   | 7 V         |
| Input current            | -30 mA to +5 mA |             |
| Off-state output voltage | -0.5 V to 5.5 V | 12 V        |
| Storage temperature      | -65° to +150°C  |             |

**Operating Conditions**
