

3 wire serial sound control IC BH3862FS

●Description

BH3862FS is a sound control IC that includes a 4 input selector, volume and a 2 band tone. REC output terminals are located between the 4 input selector and the volume. Either 0dB or 18dB gain can be chosen. Functions such as stereo/monaural mode selection and mute are provided.

●Dimension (Units : mm)

SSOP-A24

●Features

- 1) Built-in 4-input selector, mute circuit, REC gain amplifier, volume, bass and treble.
- 2) 3-wire serial interface
- 3) Resistor ladder type volume control that uses a BiCMOS process for low noise and distortion.
- 4) SSOP-A24 package

●Applications

Mini component stereo, Micro component stereo,
Radio cassette recorder
