MSP-600

New High Accuracy, Digitally Compensated EMI/RFI Protected Stainless Steel Isolated Pressure Transducer

- High Accuracy
- Low Cost OEM
- 100% Leak Proof

Features

High Accuracy Digitally Compensated One-piece Stainless Steel Construction Ranges up to 10,000 PSI or 700 BAR Amplified Outputs Wide Operating Temperature Range Low Pressure Configuration

Applications

Pumps and Compressors Hydraulic/Pneumatic Systems Off Road Energy and Water Management Pressure Instrumentation Refrigeration Equipment Agriculture Equipment Train Braking Systems

Description

The MSP series pressure transducers set a new price-performance standard for low cost, high volume, commercial and industrial applications. This series is suitable for measurement of liquid or gas pressure, even for difficult media such as contaminated water, steam, and mildly corrosive fluids or gases.

The transducer pressure cavity is machined from a solid piece of 17-4 PH stainless steel. The standard version includes a $1/_4$ NPT pipe thread allowing a leak-proof, all metal sealed system. There are no o-rings, welds or organics exposed to the pressure media. The durability is excellent.

Measurement Specialties proprietary Microfused technology, derived from demanding aerospace applications, employs micromachined silicon piezoresistive strain gages, fused with high temperature glass to a stainless steel diaphragm. This approach achieves media compatibility simply and elegantly providing an exceptionally stable sensor without the p-n junctions of conventional micromachined sensors.

This product is geared to the OEM customer using medium to high volumes. The standard version is suitable for many applications, but the dedicated design team at our Transducer Engineering Center stands ready to provide a semi-custom design where the volume and application warrants.
