

General

The 3G3MV is a sensorless flux vector control inverter for power sizes up to 7.5 kW. Vector control provides improved speed holding and motor torque at low speeds, without the need for an encoder feedback signal. To enable the 3G3MV to be integrated into systems, there are configurable digital I/O, configurable analogue I/O plus all digital I/O can be wired in NPN or PNP.

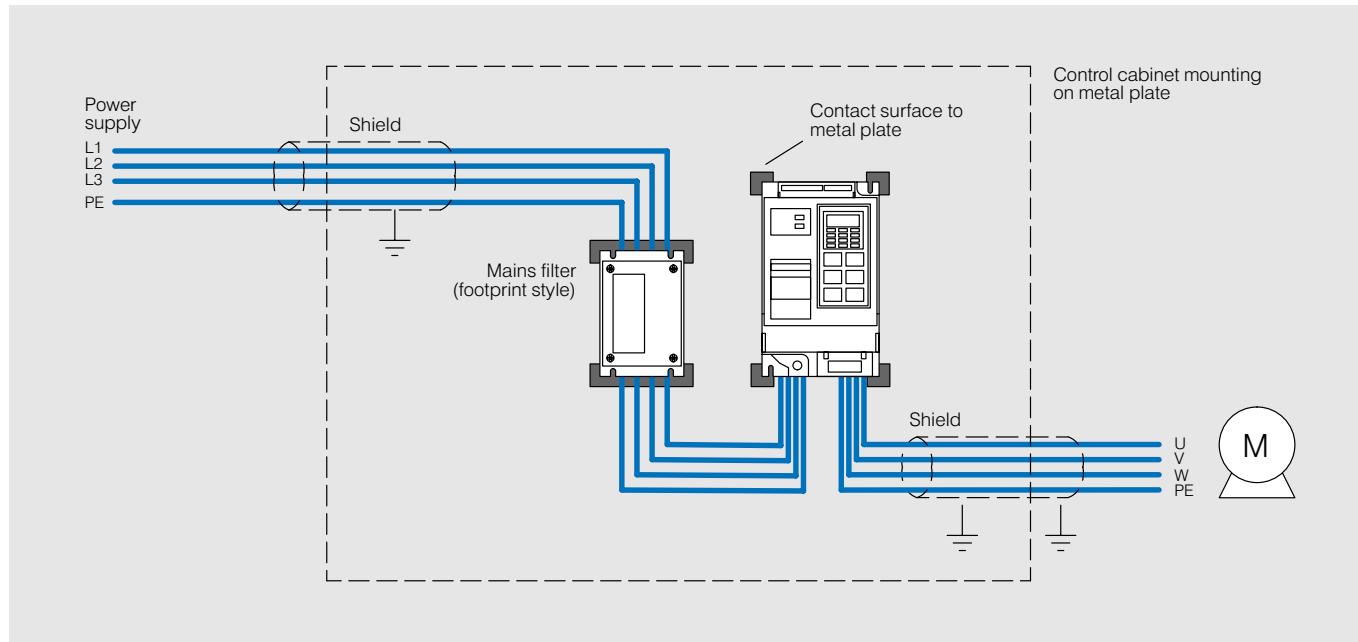

Characteristics:

- Power range 0.1..7.5 kW
- Sensorless vector controlled inverter
- Compact size
- Frequency setting signal 0..10 V / 4..20 mA
- 150% overload / 60 sec
- 100% torques at 0.5 Hz
- Customised application software
- Overload detection
- Pulse input
- Programmable second analogue input
- Integrated PID controller
- 16 programmable fixed frequencies
- DC injection
- In-built operator/copy unit
- Optional field bus modules (DeviceNet, PROFIBUS, CANopen, Interbus-S)
- True PLC functionality as option
- PC configuration tool SYSDRIVE Configurator
- Approvals: CE, UL, c-UL

System Configuration

In order to conform to the applicable EMC directives, it is necessary to fit suitable EMC filters and follow the installation guidelines given.
